

[ˈkɒkteɪlz]

COCKTAILS

Minimalism is an art form that originates from the late 60's art scene in New York City. It's characterized by extreme simplicity of form and a literal objective approach. Incorporating both art and design from its inception, the term itself has had a new development in recent years, including the concept of a minimalistic lifestyle. Not to bother with unnecessary gadgets and owning as little as possible, focusing on the essence and quality of objects rather than quantity.

It's within this notion of the 'less is more' that the philosophy behind our drinks sets its foundation.

We're devoting ourselves to refined tastes, simple and beautiful geometric forms, mathematical formulas and number series. We're also looking for to rid ourselves of the unnecessary, making the most of all the products we bring in, minimising our waste and carbon footprint. Our menu is segmented in three categories:

The Fibonacci Numbers
Geometry
Minimal design

All cocktails 155 SEK

THE FIBONACCI NUMBERS

(Fibonacci spiral)

Simple numerical shapes are evident even though they might appear complex at first.

In everything that lives there is mathematics. In flowers, in the trees of the forest, the seashells of the ocean and even the cacti of the deserts.

All life grows in line with the Fibonacci sequence, first observed by the 11th century Italian scholar and mathematician Leonardo Fibonacci.

The golden ratio or the Fibonacci spiral is visible in plant and animal life all over the world and constitutes the first focus of the menu.

The drinks are representative of the Fibonacci numbers seen in the following biotopes: Desert, Forest, Sea and Meadow.

CORN

[kɔ:n]

*A shake to complement
the best movies*

Not your typical corny
milkshake. You aren't in
TGIF but you can still
have fries with it.

COLA

[kəʊlə]

Twist on a classic cola

Sometimes minimalist
design may be seen has
lifeless and a shortcut
fueled by laziness.
Perhaps exactly what you
did when you ordered
cola because you didn't
'have time' to read
anything else and thought
it was a safe card.

CACAO

[kə'kɑ:əʊ]

Espresso 'the clear way'

Flavors from the other side of
the world. Cocoa and coffee.
Things that grow in the
wildest jungle. Probably it
hasn't been transported to
this bar by someone who lives
the minimalist lifestyle but
luckily we have Jacob
who managed to make it
look the way it does.

CITRUS

[sɪtrəs]

The minimalist Margarita

'My drink looks so
boring' Hmm, yes of
course it does! You just
ordered a minimalist
Margarita. Shut up and
enjoy it for once.

GEOMETRY

Geometry is a branch of mathematics concerned with questions of shape, size, relative position of figures and the properties of space. Building on the beauty of the clean geometrical shapes and forms, a perfect circle or an equilateral triangle can be satisfying enough in the eyes of the beholder.

PINE

[paɪn]

*A swedish forest with
tropical weather*

A dystopian take on the future. If climate change continues, pineapples will grow next to pines in a not too distant timeframe.

APPLE

[æpl]

*The fruit apple in
multiple ways*

Apple trees take four to five years to produce their first fruit. Hopefully the bartender makes this drink a little quicker.

YOGURT

[ˈjɒɡə(:)t]

Breakfast tastes, early riser

We took a typical minimalists favourite breakfast and put it in the a drink. We just replaced an avocado with alcohol.

RHUBARB

[ruːbɑːb]

*Elegance of the flavour
'rhubarb'*

A rectangle is a planar geometric figure in the form of a quadrilateral. The opposite sides of the rectangle are parallel and have the same length.

But who cares?
Everyone likes rhubarb!

MINIMAL DESIGN

Simple and refined.

No abundance of colors or shapes.
A minimalist design is a design stripped down to only its essential elements. A philosophy that strips everything except for the core. And if you think about it, it's taste that decides what a good cocktail is and what isn't. To the eye it might look plain, but don't let it deceive you. Very friendly to your palate, very unfriendly to your Instagram.
Less is more.

DESERT

[dezət]

*Hibiscus combined with
refreshing prickly pear*

The cactus has found a way to survive the tough climate. We would bet money that if the cowboys back in the days had the knowledge of how to make this drink, it would replace the water in their bags on the road to new adventures.

FOREST

[fɒrɪst]

*Classic swedish
rustic flavours*

The north of Sweden has a tremendous flora. We guess Mr. Fibonacci has never been there but guess what? We have! It's a paradise of the mathematical form.

SEA

[si:]

*Asian flavours on the
IPA trend*

No, did we just put water in your drink? Hmm... in a way we actually did. Eat the seaweed and take a look at the backside of the shell. A classic fibonacci.

MEADOW

['meɪdəʊ]

*Fresh citrus meets
orange flower*

The head of a flower also serves as an example of the Fibonacci sequence. Typically, seeds are produced at the center, and then migrate towards the outside to fill all the space in a characteristic spiraling pattern.
